

fc:DataManager

The desktop tool for database management.

SAVE TIME AND MONEY ON DATABASE MANAGEMENT

Clean data is vital to business performance.

So why is this vital resource often packed with duplicate records, wrongly formatted fields and other mistakes? Because traditional approaches cost too much and take too long.

The solution is fc:DataManager. Fast and affordable, it will help you to clean data, analyse it and turn it into useful information – all on the desktop. No other tool can match this compact, powerful utility for features, functions and value.

Find and remove duplications

Clean data by column, row, cell or file

Merge data between unlimited files

Combine any number of files

Suppress records against a selected file

Identify and correct data problems

Unwrap/wrap records

Import/export and format data

Analyse data

fc:DataManager works in seconds and saves hours of management time. You need no special skills and there's no macro programming. If you work with a data processing bureau, just one pass of the dedupe feature could make fc:DataManager pay for itself!

Your organisation relies on data. But is this valuable resource being overlooked and under-managed? Are your databases being updated and amended until the results that emerge are packed with duplicates, out-of-date records—or just plain wrong?

There are many solutions to this problem. None of them is as focused on the needs of managers as **fc:DataManager**.

This unique desktop utility for data analysis, reporting, cleaning and management gives your organisation the power to view, deploy and structure information at the push of a button.

It's the faster, simpler, easier and more productive way to leverage value from data.

Information for managers—fast.

If your success calls for cleaner data, on the desktop, you need this powerful, versatile tool.

Faster than a bureau, easier to use than competitive products costing thousands of dollars, it gives your organisation the power to clean, analyse and de-dupe the largest database at high speed.

And because all operations take place on the desktop, you have the added reassurance of keeping more operations in-house, with none of the security worries of outsourcing.

Massive functionality at the touch of a button.

fc:DataManager has a huge list of features and functions unsurpassed by any other similar product. See a small selection on the next page.

Easier and more affordable.

Developed and tested by businesspeople for use in the real world, **fc:DataManager** is powerful and robust.

Using its flexibility, sales managers can allocate customers or prospects to reps at the touch of a button; marketing managers can analyse customers by levels of geography, segment, postcode or other filter; stock controllers can analyse holdings by any combination of criteria; and service managers can see which customers are using which products.

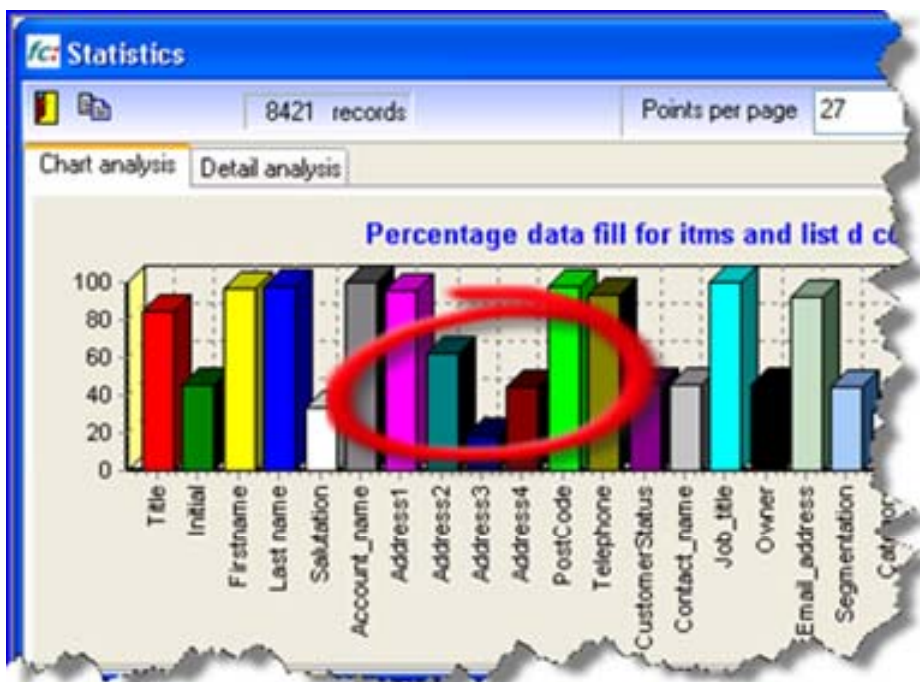

Imagine its applications in your organisation!

The radical alternative.

fc:DataManager outperforms spreadsheets and database products because it is designed for the job.

Easy to set-up and use, **fc:DataManager** means an end to macro programming!

It offers you a faster, easier way to extract and deploy information, save cash, optimise resources and protect your business image.

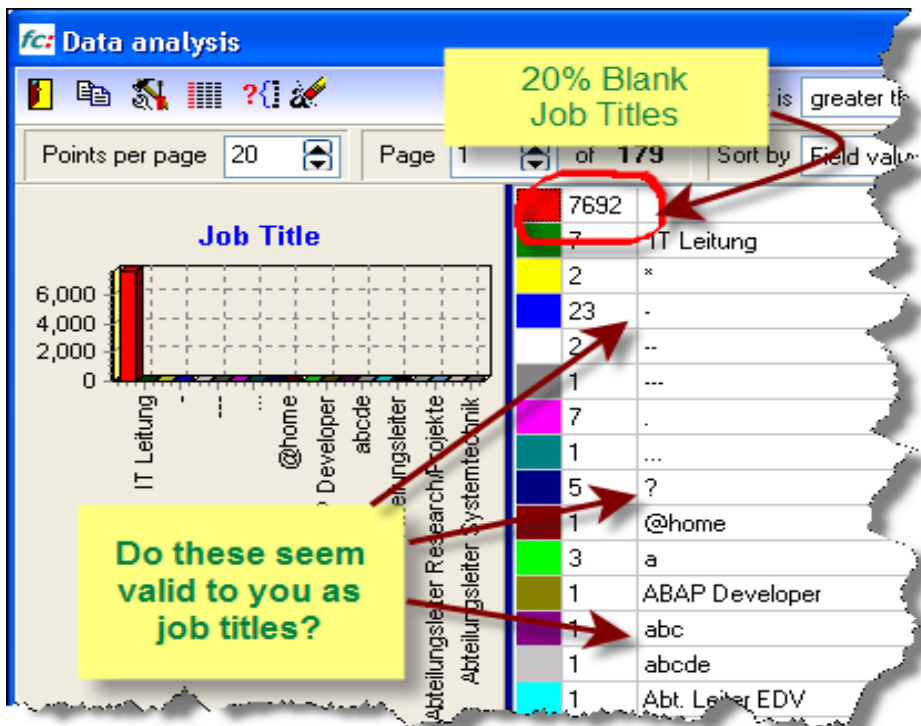

WHY YOU NEED THIS COMPACT AND POWERFUL DATABASE UTILITY

Every database contains bad data. **fc:DataManager** will show you where the flaws are at a glance. In the above example the graphical analysis function shows that several fields are under-populated, including the ones you need for effective email marketing and better customer relationships.

fc:DataManager offers you all the functionality of a powerful spreadsheet or database—and you won't have to waste hours programming macros because all the commands you need are ready to use at the top of the screen.

fc:DataManager is so powerful that it is a real alternative to many of the database administration tasks often outsourced to specialist contractors. Not only could it pay for itself in a single use, but it enables you to maintain the security and confidentiality of data all the way from collection and analysis through to use.

That's why it is the desktop information resource for managers.

DO YOU KNOW HOW BIG YOUR DATA PROBLEMS ARE?

Dirty data wastes money. The above drill-down report shows how bad this database has become. And in our experience most databases contain significant amounts of rubbish like this!

Unless you keep your data clean and up to date you may invest in unnecessary storage, pay for larger lists, incur greater postage charges and upset your customers with multiple or inappropriate mailings.

fc:DataManager delivers direct and indirect savings. Its ability to identify duplicate or missing information on the desktop enables you to negotiate refunds from your data vendor, so you only pay for the data you use.

Making your marketing campaigns more effective.

fc:DataManager provides cleaner, more accurate data to your marketing people. As a result they become more confident, productive and motivated, recruiting more customers, making your budget more effective and improving the profitability of your business.

Making you more efficient.

With fc:DataManager you can do in an hour what would take an entire day using a conventional spreadsheet! If you are paid to manage and not write macros, you need this utility.

Better information for better business decisions.

Export reports to graphics tools so you can share information and illustrate the underlying structures, geographical distributions and revenue potentials of different customer groupings. You can also identify any weak points in your current information and present a powerful management case for improvement.

Designed for marketing management.

Use fc:DataManager to get a 'feel' for your data, understand it better, see what's in that new mailing list ... whatever you want. Easily outperforming conventional spreadsheets and databases, fc:DataManager handles unlimited files. Its feature set is more impressive than you'll find in products costing ten times as much.

MANAGEMENT BENEFITS

- ✓ More accurate data for greater business efficiency.
- ✓ Reduced dependency on IT staff, freeing their time.
- ✓ Clean data in seconds.
- ✓ Increase office productivity and reduce postal costs by cutting duplicate data.
- ✓ Improve company image with clean, correct, standardised name and address details.
- ✓ Merge data from several files to deliver structured information.
- ✓ Wrap and unwrap data to/from one record making it easy to load into your databases.
- ✓ Analyse data to identify gaps, spot geographical trends and create information-rich reports.
- ✓ Suppress against exclusion files allowing you to target the prospects and customers you choose.

ADVANCED FEATURES

- ✓ Find and remove duplications.
- ✓ Clean data by column, row or cell.
- ✓ Merge data.
- ✓ Combine files.
- ✓ Suppress records.
- ✓ Identify and correct data problems.
- ✓ Unwrap/Wrap records.
- ✓ Import and format data.
- ✓ Export data.
- ✓ Analyse data.

AND EVEN MORE!

- ✓ Import and handle massive data files.
- ✓ Statistics module.
- ✓ Case converter.
- ✓ Scheduled automatic backups.
- ✓ Optional automatic backup before major change.
- ✓ Concurrent editing of shared data files.
- ✓ Restrict users to specific files and fields.

**A BRILLIANT
INTERFACE—AND ALL
THE INFORMATION YOU
NEED!**

fc:DataManager has a fantastic interface — you can always see what is happening.
Controlling its powerful features is easy using the simple click commands.
If you want to save time as well as money, it's the desktop data utility for you!

Fast start.

The main screen shows all your working files.
You can sort by date of import, size of records or alphabetically.

Quick and easy de-dupe.

fc:DataManager offers up to six fields for identifying duplicates.
You can select your preferred de-dupe methods using the drop-downs at the top.

Title	First name	Last name	Salutation_1	Job Title_1	Company	Ad1	Ad2
